### Why Chem-Dry® Protectant?

Over time and with regular wear, factory applied stain resists will experience a reduction in effectiveness. Chem-Dry Protectants refresh the performance of stain resistant carpets, fortifying its ability to resist soiling and staining.

*“Chem-Dry Wool Protectant provides excellent repellency and soil resistance to wool rugs and carpets. Chem-Dry Repel Protectant also provides outstanding oil and water repellency along with great soil resistance to carpets of all fiber types.”*  
—DuPont Chemical

### PowerGuard Protectant

The next generation of outstanding Chem-Dry Protectant is here. Not only is Chem-Dry's PowerGuard Protectant loaded with acid-dye resists to provide excellent stain resistance, but its unique polymer base also makes it an excellent protector for solution-dyed carpets like polyester and olefin. Laboratory tests confirm that PowerGuard mixed with The Natural®, outperforms all other protectants.

### Repel Protectant

Chem-Dry Repel Protectant repels most liquids, allowing spills to be removed before staining can occur. Repel Protectant can be applied to all types of carpets as it forms a molecular shield around each carpet fiber. This shield increases the surface tension of the carpet fibers, causing them to repel liquid spills, dust and dirt. This helps prevent dirt and stains from being ground in or absorbed by the carpet fiber.

### Wool Protectant

Chem-Dry Wool Protectant is a fluorocarbon, water-based product specifically developed to enhance soil and stain repellency for wool carpets and rugs. Wool Protectant is used on clean, wool carpets to form an invisible shield around each carpet fiber to resist soil and stains. The repellency provided will enable most liquid spills to be removed before staining can occur, keeping carpets cleaner, longer.
